It's nice to be independent

A Pension Fund Policy puts you on the road to independence. It offers you exceptional advantages including a tax saving on your contributions and the right to withdraw these without loss at any time.

It is astonishing how small amounts, *regularly saved*, will accumulate to provide a useful "nest egg" or a worthwhile pension or cash sum in later years.

For those who have already retired or are about to retire, the R.N.P.F.N. offers the opportunity of an increased income – on generous terms and with valuable tax relief – through an *Immediate* or *Last Survivor* Annuity.

ROYAL NATIONAL PENSION FUND
FOR NURSES
Patron: Queen Elizabeth the Queen Mother

Founded 1887 · Assets exceed £17,000,000

MEMBERSHIP OPEN TO ALL NURSES, HOSPITAL OFFICERS, AND REGISTERED MEDICAL AUXILIARIES

For full particulars of policies related to your personal needs,
(giving date of birth) to: THE R.N.P.F.N. (DESK) · 15 BUCKINGHAM STREET · LONDON · WC2

DUST-BORNE CROSS-INFECTION

The problem

A disquieting situation arising in hospitals throughout the country is the closure of wards due to dustborne cross-infection. The floors act as a depository for dust and dirt (whether by settlement or displacement) and bacteria laden particles can be seriously disturbed by brooms, mops or non-approved polishing and vacuum cleaning machines.

The solution

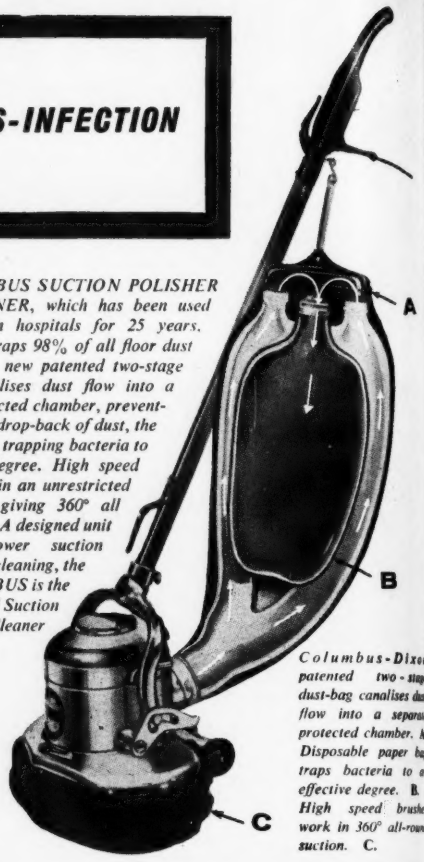
Medical research has established that suitable, controlled conditions *can* help to eliminate or reduce to acceptable proportions the risk of cross-infection from pathogenic bacteria.

Now, for the first time, a floor cleaning machine has been developed which makes a positive contribution towards overcoming the risk of cross-infection. This machine, the Columbus Dixon Model III Suction Polisher and Cleaner, has undergone laboratory tests at a London Hospital, and the results of these tests are now available in our new publication. The detailed case-history of the outbreak of cross-infection, which prompted the development and testing of this machine, has already been published.*

**THE LANCET (1958), ii 713.*

Micro-photographs, reproduced top left, illustrate the reduction in the bacterial count where the new COLUMBUS Machine, with two-stage dust control and disposable dust-bag, was employed.

The COLUMBUS SUCTION POLISHER AND CLEANER, which has been used successfully in hospitals for 25 years, controls and traps 98% of all floor dust and dirt. This new patented two-stage dust-bag canalises dust flow into a separate protected chamber, preventing fall-out or drop-back of dust, the disposable bag trapping bacteria to an effective degree. High speed brushes work in an unrestricted vacuum field giving 360° all round suction. A designed unit for high power suction polishing and cleaning, the new COLUMBUS is the most advanced Suction Polisher and Cleaner in the World.



Columbus-Dixon patented two-stage dust-bag canalises dust flow into a separate protected chamber. A. Disposable paper bag traps bacteria to an effective degree. B. High speed brushes work in 360° all-round suction. C.

CD ORGANIZATION

FIRST CHOICE FOR WOUNDS, BURNS AND SKIN INFECTIONS

antipeol

CUTANEOUS OINTMENT

ANTIPEOL OINTMENT rapidly reduces inflammation. It contains the sterile broth filtrates of the most prevalent skin micro-organisms — staphylococcus, streptococcus, B. pyocyaneus — with a healing and soothing ointment base of lanoline, zinc and ichthammol.

ANTIPEOL is an invaluable and completely safe treatment for infectious conditions of the skin, mucous membranes and natural cavities.

The chief indications are: ABSCESSES, BOILS, BURNS, ECZEMA, ULCERS, IMPETIGO, HAEMORRHOIDS, SYCOSIS, WOUNDS AND ALL INFLAMMATORY CUTANEOUS INFECTIONS. ANTIPEOL LIQUID, the broth filtrate without the ointment base, is widely used for infections of the ear, for septic cavities and suppurating wounds.

Produced by the makers of:
ENTEROFAGOS *for intestinal complaints*
RHINO-ANTIPEOL *for naso-pharynx infections*
OPHTHALMO-ANTIPEOL *for ocular infections*
DETENSYL *for reducing arterial tension*

A Rational Salary Structure

THE SALARY STRUCTURE for nurses and midwives has grown haphazardly over the years. The Royal College of Nursing has now initiated a survey which is the first real attempt to obtain facts about nursing and midwifery practice on which a rational salary structure might be based. The profession has long been aware that not only are salaries for many grades too low in relation to those offered elsewhere, but that within the profession itself differences in pay between various grades do not always justly reflect differences in responsibility and skill. The results of the survey will provide the professional associations with factual information for use in negotiations on the Whitley Council.

The working party set up by the Royal College of Nursing last autumn to study the salary structure has taken on a big piece of work and an important one; it is also a difficult one. So formidable a task could not have been embarked upon without the interest and help, the skill and knowledge, of the non-nursing experts in the working party. At an early stage of the study, its wide implications were recognized and the College sought and obtained the willing and fruitful co-operation of the other professional organizations for nurses and midwives.

A study of this type cannot be carried out for a passive, inarticulate body of people. Much help has already been received from nurses and midwives busy with their normal duties but willing to give time and take trouble to provide the information necessary for an effective study. On page 702 of this issue an article gives more facts about the working party and its activities and explains that information is once more needed from nurses and midwives, this time from a considerable number of them. We hope that they will respond as willingly and as promptly to this request as nurses and midwives responded to calls for their aid in the early stages of the work.

Briefly then, the study of the salary structure is a piece of work that is being undertaken by the professional associations of nurses and midwives, on the initiative of the Royal College of Nursing, and under the guidance and with the help of experts. The object is to obtain, with the assistance of a representative sample of practising nurses and midwives in the National Health Service, descriptions of their work from which composite 'job descriptions' for each grade can be prepared. These can be evaluated and adjustments in the salary structure considered in the light of the information obtained.

No magic formula will result, bestowing on every nurse and midwife the salary she deserves, but a working tool will be placed in the lands of the organizations to whom nurses and midwives employed in our National Health Service entrust the task of negotiating their salaries.

News and Comment

Matron-designate of The London

Miss Phyllis Friend, deputy matron of St. George's Hospital, London, W.1, has been appointed matron-designate of The London Hospital and will take up her appointment in September. Miss Friend, who trained at The London Hospital has held posts as staff nurse, ward sister, sister tutor and assistant matron there, and obtained her sister tutor diploma at the Royal College of Nursing and took the administrative course at King Edward's Staff College for Matrons. As matron-designate, Miss Friend will spend a year visiting hospitals in this country and abroad and a further year as deputy matron at The London Hospital. Readers will join us in offering our congratulations and good wishes to Miss Friend on her new appointment.

Miss P. M. Friend

Tetanus Organisms in 'Grey' Wool

A Ministry of Health memorandum, HM (59) 53, informs hospital authorities that tetanus organisms may be present in unbleached (grey) cotton wool. Although not normally used for dressings, grey cotton wool is sometimes used for the padding of splints and other purposes. It may be brought into the operating theatre or other parts of the hospital where sterile dressings are used and the possibility of spores in unbleached cotton wool contaminating dressings or directly infecting wounds must be recognized. It is recommended that hospital authorities should in future avoid the use of grey cotton wool which has not been satisfactorily sterilized, in parts of the hospital where it might come into contact with dressings or wounds. Although less liable to heavy contamination, even bleached cotton wool has been found in the past to contain tetanus spores and only wool sterilized satisfactorily can be regarded as entirely safe for wound dressings.

PMRAFNS Matron-in-Chief

Group Officer Alice Lowrey has been appointed matron-in-chief, Princess Mary's Royal Air Force Nursing Service, in succession to Dame Alice Mary Williamson, who is retiring on September 1. Group Officer Lowrey trained at the Royal Hospital Sheffield, and joined the Service in 1932. From 1952, as senior matron at the RAF Hospital, Wroughton, she supervised the training and work of nursing officers and RAF and WRAF nursing attendants employed on Casualty Evacuation Service. Group Officer Lowrey was subsequently appointed principal matron, Headquarters Middle East Air Force, and visited RAF hospitals in the Far East. In 1958 she returned to the United Kingdom and took up her present appointment of principal matron, Headquarters Technical Command. She will take up her new appointment with the rank of Air Commandant.

Group Officer Alice Lowrey, R.R.C., who becomes matron-in-chief, PMRAFNS, on September 1.

We regret that the second article in the series on *Divine Healing*, with other material, is unavoidably held over.

Eileen Joyce Red Cross Recital

Miss Eileen Joyce is giving a pianoforte recital on Thursday, June 25, at 8 p.m., in the Chapel, The Royal Hospital, Chelsea, in aid of the Red Cross. It is to celebrate the centenary of Solferino. Henri Dunant travelled through this battlefield in North Italy, where 40,000 men were killed or wounded in one day: shocked by such suffering Dunant gave the rest of his life to the formation of the international body of men and women pledged to help the sick and injured. Today, welfare, care of the aged, disaster relief, are all the concern of the Red Cross. Tickets, from 7s. 6d. to £1 1s., are obtainable from The Chelsea Red Cross, 67, Old Church Street, S.W.3.

The Minister of Health and Mrs. Derek Walker-Smith at the Royal College of Nursing on the occasion of the Public Health Section conference on the Younghusband Report with, left to right, Dr. J. D. Kershaw, Miss E. M. Wearn, Miss M. K. Knight, Miss C. M. Hall and Mr. R. Huws Jones.

Poise and Movement

CORRECT POSTURE can obviate many abnormal strains in nursing. A knowledge of body mechanics and its intelligent use can do much to prevent undue fatigue in most nursing tasks.

A preview of the Ministry of Health's newly completed film *Poise and Movement* was shown at the film theatre of the Central Office of Information on Monday, June 15. (Review later.)

◀ *The figure on the left shows the posture too often assumed by the standing nurse.*

▲ *In carrying trays the weight should be supported by the flat of the hands, with the elbows tucked well into the sides.*

◀ *Lifting the end of an occupied bed should always be done by two nurses. The back should be kept straight, movement occurring only at the hips and knees; the powerful gluteal and quadriceps muscles do all the work.*

TALKING POINT

ABOUT TWO WEEKS AGO the leader writer of *Guy's Hospital Gazette* wrote a little plea for the later waking of patients—"May our patients start their day just a little later in the morning than 6 a.m.?"

This plea produced a spate of correspondence from the nursing staff, which was not surprising as the writer admitted partial ignorance of what is involved—'seldom having been in the wards at dawn'. All of us have seen far too many dawns for there to be any romanticism of the Magdalen-Tower-on-a-May-morning about them and the nurses told him just what was done in the early morning, and produced a most formidable list. One lady from Lancashire on the subject of the serving of breakfasts by the night nurses wrote "Why, some women would not dream of preparing and serving a meal for over 20 persons without calling in an outside caterer."

But alas the arguments were weakened when the nurses shifted their guns to a justification of the practice. One writer who deplored the practice nevertheless asked how it could be altered "unless the hour-to-hour pattern of nursing in the hospital is changed." (This, of course, was precisely what was recommended in the recent Royal College of Nursing Report on Night Duty—so it can't be as heretical as all that.) My sympathy goes to the night superintendent who points out that the patients' short hours of rest are all too often disturbed by noise from within the hospital precincts.

But, as nurses, we really must make up our minds whether or not the early waking of patients is a Good Thing or a Bad Thing. If we are all decided that it is a Good Thing, fair enough, let us continue joyfully to switch the lights on at 6 a.m.—but if we decide that it's a Bad Thing, then let's change the whole system, tradition or no tradition.

Of course, this will affect the whole hospital, from the cleaners to the consultants. But if a 24-hour, seven day a week service is to be provided, then it should be shared by everyone and not just by the nursing staff and the housemen. We talk glibly of the team spirit, but it is very noticeable that a large part of the team disappears at 5 p.m., leaving The Rest to cope for the next 16 hours alone. And to be honest, this two-thirds of the 24 hours are covered with a remarkable absence of grumbling on the part of those who do it.

The *Guy's Gazette* criticism that early waking of patients is largely due to ingrained habit may well be quite right, however maddening it may be for the nursing staff; a sub-committee has just been appointed "To consider the whole programme of the in-patient's day (and night) with a view to obviating early waking and unnecessary noise and to make recommendations."

As this working party has been appointed by the most powerful nursing committee in the country, the Standing Nursing Advisory Committee of the Central Health Services Council, perhaps we may see some results from the recommendations that will certainly be made in the light of full knowledge of the situation.

WRANGLER.

UROLOGY

Renal Anatomy and Physiology

MORTON WHITBY, F.I.C.S. formerly Chief Assistant, Genito-Urinary Department, West London Hospital, Hon. Urologist, St. Mary's Hospital, Natal, and Surgeon, Stanger Hospital, Natal

A SOUND KNOWLEDGE of renal anatomy and physiology is important to a nurse for several reasons. It enables her to understand the theory of renal function and the purpose of renal tests; it helps her to visualize what is taking place in the kidneys during treatment, and every surgeon appreciates her intelligent co-operation when discussing a case, without which his work cannot achieve the success desired for the patient.

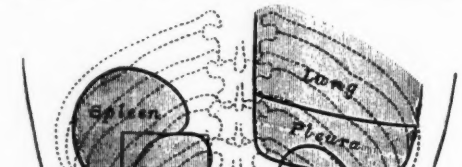
Anatomy

The surface markings of the kidney lie within a parallelogram on the dorsal aspect of the trunk. Two horizontal lines are drawn through the 11th thoracic and the third lumbar spinous processes, and two vertical lines 2.5 cm. and 9.5 cm. from the median plane.

The kidneys lie on each side of the vertebral column, behind the peritoneum. They extend from the upper border of the 12th thoracic vertebra to the lower border of the third lumbar vertebra. The right is usually lower. They are 11 cm. long, 6 cm. wide and 3 cm. thick.

From the hilum of the kidney the vein, artery and ureter emerge; together they are referred to as the pedicle, and they are in that order when seen from the front during an operation.

The hilum of the kidney lies opposite the lower border of the first lumbar vertebra. The ureter descends from its centre just medial to the tips of the transverse process of the lumbar vertebra.



[From *Gray's Anatomy*, Longmans, Green and Co.]

Each kidney is enclosed within a fibrous capsule which is easily stripped off in normal cases; outside this capsule the kidney is embedded in a varying quantity of perinephric fat, surrounding which is the perinephric fascia, covered in front by the peritoneum.

If a kidney is sliced open it will be seen to consist of an outer cortex which has a brownish appearance and an inner medullary substance which has a darker colouring, with typical radiating striations. The medulla forms the pyramids and between them are the arches, which can be seen in a pyelogram.

Blood vessels enter into numerous glomeruli from which the waste products of the body are filtered and collected; these waste products pass through a system of tubules and finally appear as urine in the pelvis of the kidney.

In about one in 200 cases the anatomy of the kidneys or the vessels supplying them is different. There may be no central pedicle where the vessels and nerves enter the hilum of the kidney. I had the experience of operating on such a case. There was an upper pedicle entering the upper pole of the kidney and a lower pedicle entering the lower pole. At first I thought the lower pedicle was an aberrant vessel, until I had examined where the central pedicle should have been.

When such an anomaly occurs the artery usually comes off direct from the aorta, but in the lower pedicle it may come off the external iliac artery.

Supernumerary and double kidneys are extremely rare.

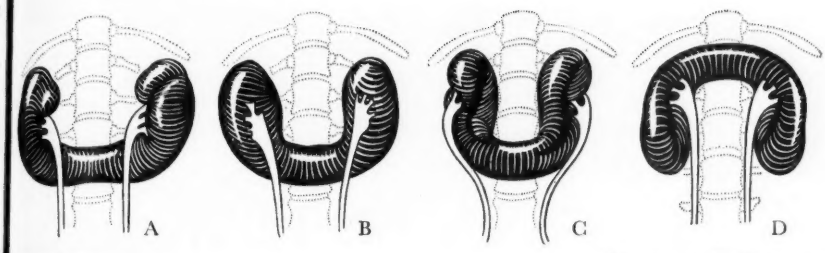
Absence of one kidney is comparatively common. The late Sir John Thomson-Walker noted 18 cases in the literature on the subject in which nephrectomy had had disastrous results—rapid uraemia and death. Of course this tragedy is not likely to occur today because of our careful pre-operative investigations.

Other anomalies are associated with unilateral kidney, especially in the reproductive organs: absence or atrophy of a testis, vas deferens, seminal vesicle or an undescended testis; absence of uterus, or a bicornus uterus or infantile uterus, absence of ovaries or Fallopian tubes. The consequent hormone imbalance affects the character of the individual.

Double renal pelvis and ureters are quite frequent, and often make urinary tract infection more probable because the normal descent of urine to the bladder is hindered; it is also more difficult to cure, despite antibiotics.

Horse-shoe kidney occurs in about one in 400 cases. People with such an anomaly are more prone to disease of the kidney and reflex symptoms. I had a patient who vomited persistently, which led to his being treated for duodenal ulcer. Urinary infection was discovered which led to a complete urological investigation, and it was found that the patient had a horse-shoe kidney and an enlarged prostate. The back pressure caused reflex vomiting. Prostatectomy cured him.

Ectopic kidney can be a serious abnormality, as it has not been unknown for it to be removed in error during an abdominal operation. Such kidneys sometimes have an unusual shape and can be taken for a chronic salpingitis.



HORSE-SHOE KIDNEY

A. Ureters internal and crossing isthmus. B. Ureters central and crossing lower poles. C. Ureters external. D. Inverted with isthmus superior (very rare).

[from *Manual of Urology* by A. W. Badenoch, William Heinemann Medical Books, Ltd., London.]

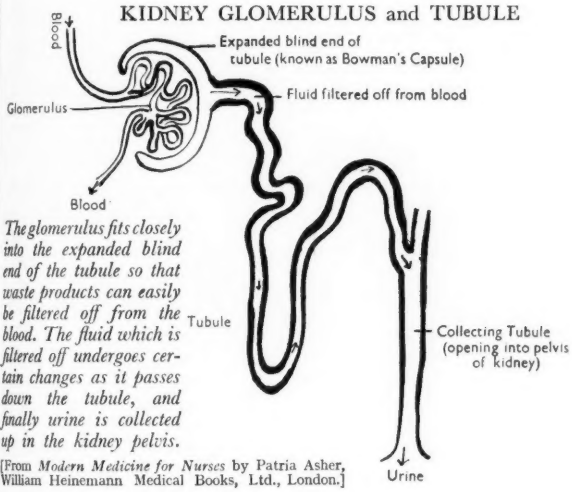
Physiology

The function of the kidney is to separate the urinary constituents from the blood as it is filtered through the glomeruli and renal tubules, and thus keep the composition of the blood constant.

It is mainly concerned with the excretion of water, chlorides, sulphates, and products of protein metabolism. In this way the kidneys co-operate with the largest organ of the body—the skin. They also co-operate with the lungs in maintaining the normal acid-alkaline balance of the blood by varying the amount of carbon dioxide excreted.

The process is that one fluid, arterial blood, enters the kidneys; two fluids, venous blood and urine, leave

KIDNEY GLOMERULUS and TUBULE



The glomerulus fits closely into the expanded blind end of the tubule so that waste products can easily be filtered off from the blood. The fluid which is filtered off undergoes certain changes as it passes down the tubule, and finally urine is collected up in the kidney pelvis.

[From *Modern Medicine for Nurses* by Patria Asher, William Heinemann Medical Books, Ltd., London.]

it. But they are different in composition.

Although the various constituents of the blood and the urine vary from time to time the principal constituents in the plasma of the arterial blood and the urine are:

	Arterial Blood Plasma %	Urine %
Total Solids	10	4
Proteins	7.5 to 9	nil
Chlorides	0.37	0.6
Urea	0.03	2.0
Sugar	0.10	nil
Uric acid	0.003	0.05
Hippuric acid	nil	0.07
Creatinine	0.001	0.1
Ammonium salts	0.001	0.04

Control of Renal Function

The renal nerve plexus has vasoconstrictor fibres from the sympathetic system and dilator fibres probably from the vagus, which act upon the arterial system of the kidneys. Hypertension could be explained by the lack of co-ordination between these two opposite factors.

There can be no doubt that nervous stimulation and nervous inhibition does affect the amount of urine excreted.

It has been found that the kidneys increase in size when given a high salt or protein diet. Prolongation of a heavy protein diet will lead to a true hypertrophy.

A prolonged salt diet will increase blood pressure.

Renal Efficiency

Renal efficiency can be determined by renal function tests.

Renal function may be severely impaired *without* undue accumulation of urinary constituents in the blood when certain compensatory mechanisms are brought into play. The most important example is in polyuria. Deficient concentration is for a time balanced, or compensated for, by increased volume; so that, in a given period, the total quantity of waste products eliminated is sufficient to prevent accumulation. Thus there is a compensated impairment of renal function (Fishburg). Eventually, with progressive loss of function, a stage is reached where there is decompensated impairment of renal function—renal insufficiency supervenes.

Impaired renal function results either in oliguria, that is, diminished urinary excretion, or anuria, a complete cessation of excretion.

Renal Tests

Extra-renal causes of decompensation are a common factor in oliguria, where the water of the body is diverted into the tissues as a result of myocardial failure, vomiting and diarrhoea; therefore several tests should be adopted in estimating renal function.

1. Twenty-four hour record of intake and output of fluids.
2. Urinalysis, chemical and microscopic.
3. Urea concentration.
4. Excretion urography.
5. Blood urea.
6. Blood urea clearance.
7. Alkaline tide.
8. Divided phthalein.
9. Indigo-carmine.
10. Cryoscopy.

Intake and Output of Fluids in 24 Hours

Accurate charting of fluids can be a valuable aid to

the surgeon, especially after an operative procedure in or around the genito-urinary tract.

Urinalysis

Absence of renal damage cannot be indicated clearly by ordinary chemical examination of the urine. Microscopic examination of a drop specimen will complete the picture. It will show whether there is an increase in the number of red or white blood cells, an increase in the number of crystals, and whether bacteria are present.

Urinary tuberculosis can only be found from a 24-hour specimen or a guinea pig inoculation; and even then I have had cases in which these tests were normal, but pyelography demonstrated the beaded ureter indicative of urinary tuberculosis.

The specific gravity dilution excretion test is one of the best methods of ascertaining renal function when the causes of extra-renal oliguria are excluded (Conybeare).

At 6 a.m. the bladder is emptied naturally and the patient immediately drinks two pints of cold water. He eats and drinks nothing else until the end of the test. At 7 a.m. the bladder is emptied, quantity measured and charted, specific gravity tested and charted, and a specimen for microscopic examination retained. The procedure is repeated at 8, 9 and 10 a.m.

In a normal subject the whole of the 1,200 ml. (two pints) of water will be eliminated (except in very hot climates where perspiration will account for about one quarter).

The specific gravity in normal cases should show at least one specimen below 1,010 and it may even be as low as 1,002. Values *above* 1,008 should be regarded with suspicion of impaired renal function.

If poor excretion is associated with normal specific gravity throughout, then the impairment is due to an undiagnosed extra-renal cause.

Urea Concentration Test

The patient is given 15 g. of urea in 100 ml. of water at 6 a.m. Nothing else is given by mouth. Specimens of urine are taken one and two hours afterwards; the second specimen will contain more than 2 per cent. of urea if the kidneys are functioning normally.

Excretion Urography

In addition to outlining the renal tract by intravenous pyelography, urography will indicate the rate of excretory power of the kidneys. Normally a good shadow of the renal pelvis should be obtained in five minutes. If on the other hand the dye passes through too quickly, showing an inadequate shadow of the kidney calyces but an early urinary bladder shadow, it will indicate a polyuria from some cause, which possibly is due to infection.

Blood Urea Test

Normally the blood urea contains 2-40 mg. urea/100 ml. In the tropics up to 50 mg. can be considered normal. One great fault in this test is that a high blood urea may be due to extra-renal causes when renal function is quite normal; so this test is useless unless the extra-renal causes have been excluded first.

A combination of blood urea with urine urea tests will give better evidence of renal function. If blood urea is raised and the urine contains less than 2 per cent. of urea, it would be evidence of damaged renal function.

Urea Clearance Test

The urea clearance test (Van Slyke) is based on the fact that the amount of urea excreted each day must be independent of the amount of urine passed, otherwise urea would accumulate in the body. On a given diet, therefore, the concentration of urea in the urine must vary with the dilution or the concentration of urine; that is, urea (U) multiplied by amount of urine (V) must be constant. But these factors must depend on the concentration of the urea in the blood and the amount of blood which is theoretically cleared of urea (C) in passing through the kidney is $U \times V = B \times C$ where B = blood urea: that is $\frac{UV}{B}$.

$$\text{The clearance is } \frac{\text{U square of the root V}}{\text{B}}$$

To carry out the test the bladder is emptied, a pint of water taken and samples examined of urine passed $1\frac{1}{2}$ hours later.

Alkaline Tide Test

It is said the renal function is impaired when the alkaline tide remains consistently unchanged before and after a meal.

Phthalein Test (PST)

This test is carried out by giving 1 ml. of phenolsulphonphthalein intramuscularly nine minutes after the patient has drunk 400 ml. (two glasses) of water and collecting a specimen of urine every 30 minutes (five specimens); the patient drinks 200 ml. of water before each specimen of urine is collected.

Label each specimen with the time of collection:

Dye injected 10 a.m.

1st specimen 10.30 a.m. 2nd specimen 11 a.m.
3rd specimen 11.30 a.m. 4th specimen 12 noon.
5th specimen 1 p.m.

Another method is to give the phenolsulphonphthalein intravenously 30 minutes after 400 ml. of water has been taken; the specimens are collected after 15 minutes 30 minutes, 60 minutes and 120 minutes.

If the patient has bladder neck obstruction a catheter must be passed each time.

The output of phthalein is measured by means of a colorimeter.

Indigo-carmine Test

The bladder is emptied by means of a catheter which is then spigotted. 10 ml. is given intravenously or intramuscularly of a 0.4% solution of indigo-carmine. Urine is collected from the catheter seven and 10 minutes after intravenous and 24 minutes after intramuscular injection.

This test is most often used during cystoscopy, when the surgeon observes the time the dye first appears at the orifice of each ureter. The normal rate is within 10 minutes.

To our Readers and Advertisers

A new phase in the printing dispute may mean that the *Nursing Times*, along with other journals, will not appear next week. We naturally hope that a settlement in good time will enable the *Nursing Times* to maintain its record of almost unbroken publication for 54 years. We know you will understand our difficulties. Do please continue to send in articles, pictures, reports and letters (as short as possible); subscriptions will of course be adjusted.

Cryoscopy

Cryoscopy is the determination of the freezing-point of a fluid, usually blood or urine, as compared with the freezing-point of distilled water. The greater the contents of solids in a fluid, the lower will be its freezing-point.

The normal freezing-point of urine is between 0.8°C. and 2°C. The point at which blood from a healthy subject will freeze is from 0.56°-0.58°C. A wide variation from these figures indicates a disability of the kidneys or the heart.

My personal preference is to carry out the specific gravity dilution excretion, urea concentration, and blood and urine urea tests; and the indigo-carmine test if cystoscopy is performed.

Water

Dr. Candau, director-general, WHO, has stated: "It is disheartening to record that in 1959 in many major cities and their densely urbanized satellites many millions of people are still dependent upon individual wells, springs or itinerant purveyors for water. Cities, ranging from two to seven or eight million people, not only fail to furnish water through pipes to households of several hundreds of thousands of their inhabitants, but even to those directly connected to the system they supply an unsafe water, often on a rationed basis of a third of each day or less. This significant fact is often ignored in determining environmental sanitation programmes.

"The labour involved in drawing water and transporting it for a long distance, a task which often falls to the lot of the women, results in their virtual enslavement. Frequently as much as one-half of their time, day after day, month after month, is taken up with this essential chore. A very simple calculation will show that there is no more efficient means of transporting water than by a pipe. A small pipe, one inch in diameter, will deliver in a day, without human effort, as much water as can be carried by 150 women working steadily for eight hours."

Letters to the Editor

The editor welcomes readers' letters, which should be addressed to her at *Nursing Times*, Macmillan and Co. Ltd., St. Martin's Street, London, W.C.2. (WHI 4757/8/9). Names and addresses need not be published but must be given.

TUTORS' SALARIES

MADAM.—I should have thought that S.R.N., S.T.D., Cheshire, would get some support for her views on tutors salaries from her professional organization. Is there an organization for tutors, and if so is it alive? I have heard no official word from it on tutors' salaries in the last five years.

D. I. DAY, Tutor.

Wilts.

CONTRACEPTION

MADAM.—Since no comments are forthcoming on the Talking Point of May 8 I should like to make the following points. It would appear that any decision to include the information concerned in the syllabus for general training should be considered in the light of its necessity in the nurse's work, and the frequency with which the need occurs. Further, it might be questioned whether all nurses should be so instructed, or only those taking certain post-basic trainings, e.g. midwifery, public health, etc. I note that Wrangler does not advert to the widely recognized fact that the use of contraceptives can have detrimental psychological effects.

The nurse's personal use of the information, and any other arguments for or against artificial contraceptives, are largely irrelevant to the decision. The nurse would be justified, for instance, in giving desired information to a patient, even though the nurse's own conscience would preclude her from availing herself of it. Climates of opinion and religious teaching alike are not points at issue.

If the nurse needs the information for her work, and if granted that the question will arise with sufficient frequency to justify its inclusion in the basic course, it must also be considered whether the nurse's responsibility should be to furnish technical information, or whether, in fact, her help should be to refer the patient elsewhere. In the latter case, it would probably be best for her to be in possession of the facts even if she were advised not to impart them herself.

My personal view is that this subject is unnecessary in the general syllabus, but it, and guidance on the treatment of the question for those doing district work, health visiting, gynaecology, etc., are desirable.

R.G.N., S.C.M.

Dublin.

SUPERINTENDENT MIDWIFE

MADAM.—I would like to uphold the views of S.R.N., S.T.D. from another point of view—that of the superintendent midwife of a midwifery training school in a general hospital in which an assistant matron, and I believe in some cases, the matron, has only S.R.N. qualification, without even Part 1 Midwifery experience.

The superintendent midwife, usually a woman who has specialized in her subject for a number of years as well as having been a midwifery tutor, is treated as a subordinate to such administrators, which is galling to say the least of it.

The maternity unit, usually called a department, and frequently twice the size of many maternity hospitals, should in such cases be run quite autonomously. This policy is advocated by the Royal College of Midwives, but seems to be put into practice in so few instances.

I understand that one of the principles of good administration is that "the leader should have more experience than the led", but apparently this does not apply in hospital administration.

S.R.N., S.C.M., M.T.D.

London.

SALARY STRUCTURE SURVEY

Job Descriptions

"Come tell me how you live," I cried
"And what it is you do."

THIS INVITATION, extended by the White Knight to the aged man a-sitting on a gate, produced a series of fascinating job descriptions, rich in variety. Nurses and midwives throughout the country will, over the next month or two, receive a similar invitation from their professional associations and it is hoped that they will co-operate as willingly.

These invitations are part of a programme of work that is in progress to assess the salary structure for nurses and midwives in the National Health Service. The Royal College of Nursing set up a working party for this purpose and is carrying out the work in collaboration with the Association of British Paediatric Nurses, the Associations of Hospital Matrons and of Scottish Hospital Matrons, the National Association of State Enrolled Assistant Nurses, the Royal College of Midwives, and the Society of Registered Male Nurses. The chairman of the Working Party is Miss M. E. Bowley, B.SC., PH.D., from the Department of Political Economy, University College, London, and the work is being carried out with the help and guidance of Miss J. Woodward, M.A., D.P.S.A. lecturer, Oxford Delegacy for Social Administration and at the Imperial College of Science, and of Mr. F. P. Cook, a staff manager.

Exploratory investigations suggested to the working party that the study of the salary structure could best be accomplished through a process of 'job evaluation' based on reliable 'job descriptions'. It was decided to include in the study all grades of trained staff under the Nurses and Midwives Whitley Council, with the exception of nurses in the mental field.

What was needed was a series of descriptions of the work of the 200-300 grades of staff listed in the Whitley salary scales, paying due attention to the fact that each grade applied to a wide range of situations. With so wide a field to cover, it was decided to use a postal questionnaire to obtain the information.

Preparatory Discussion

To make the questionnaire comprehensive and fair to all grades some preparatory work was needed. The first step was to obtain job descriptions from practising nurses and midwives at two residential conferences. The first was held at Barnett Hill, Red Cross House, near Guildford and the second at the Hayes Conference Centre, Swanwick, near Derby. The participants represented as wide a range as possible of the grades of nurses and midwives. They met in groups of about eight, each with a reporter and a chairman. Each participant wrote a description of her or his job and the descriptions were then discussed in the groups. The evening was spent on ranking, almost as a parlour game. The participants were asked to rank certain nursing jobs within their own field of work, then within the nursing profession as a whole and finally with other types of job in the community at large.

On the second day Mr. Cook introduced the participants to a method of job evaluation based on a points system. Each group then tried *as an experiment* to evaluate the jobs that they had described the previous day and reported their conclusions at a plenary session that brought the conference to a close.

From the information obtained at the conferences the first questionnaire was drawn up. The working party was fortunate in being offered the help of post-graduate students from the universities of Cardiff, London and Oxford. These students acted as reporters at the conferences and subsequently tested the questionnaires by carrying out a series of interviews. They obtained some excellent descriptions of various types of work and had many constructive comments to offer.

Postal Questionnaires

With this background information in hand, the time has now come to send out the postal questionnaire to a representative sample of nurses and midwives. How will the sample be chosen? The obvious way would be to take every *n*th name on a complete list of nurses in the National Health Service. But no such list exists. A sample of working units in the hospital and public health fields is therefore being taken instead and a request will be made for a complete list of the names of the nursing and midwifery staff employed in the units which are drawn in the sample. From the lists, names of those to receive the questionnaire will be picked at random. A one in 10 sample of hospitals in England, Scotland and Wales has been drawn and the matrons of these hospitals are being invited to supply the names of their nursing and midwifery staff, from which the sample of individuals can be picked. These individuals will be asked to complete the questionnaire giving a description of the work they do, and return the completed form to the Royal College of Nursing.

The information obtained from the questionnaires will be treated in the strictest confidence, and neither the names of the individuals concerned nor the places where they work will appear in any report.

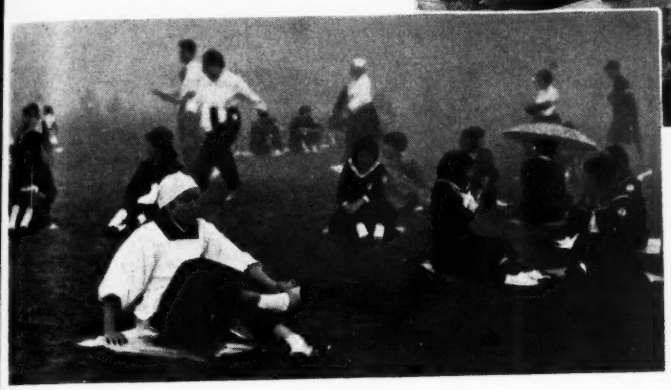
The replies to the questionnaires will be analysed and composite job descriptions prepared. They will be illustrated and modified by a series of tables. The first stage of the study will then be complete and it will be possible to move on to the process of job evaluation.

H. MARJORIE SIMPSON, B.A., S.R.N.,
Officer to the Survey, Royal College of Nursing.

So much interest has been expressed in this subject, and the talks given by Miss Woodward and Mr. Cook at the residential conferences, that we hope to be able to publish further articles for the interest of our readers.

Operation Earthquake, Japan

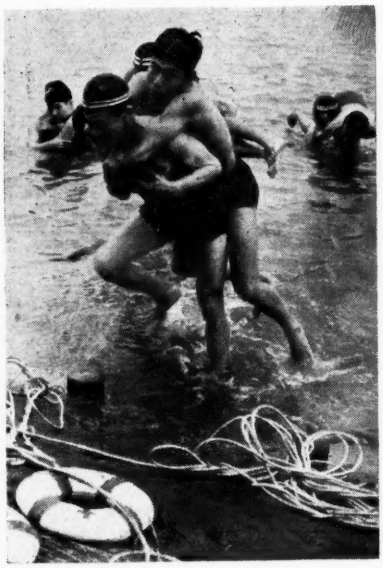
Smoke from 'burning buildings' hangs over 'victims' assembled in groups by rescue workers.



Red Cross nurses being transported by pontoons of the Defence Force as they would be if a bridge were destroyed by an earthquake.

THE JAPANESE RED CROSS, aided by the Defence Forces, firefighters and police, combine in practising large-scale earthquake rescue work in Tokyo, a city always vulnerable to such disasters. It was an earthquake, followed by a tidal wave and fire which completely destroyed Tokyo and Yokohama in 1923.

A volunteer nurse dresses the 'injuries' of a 'victim'. ▶



River rescue squads bring in occupants of boats sunk by a tidal wave caused by an earthquake.

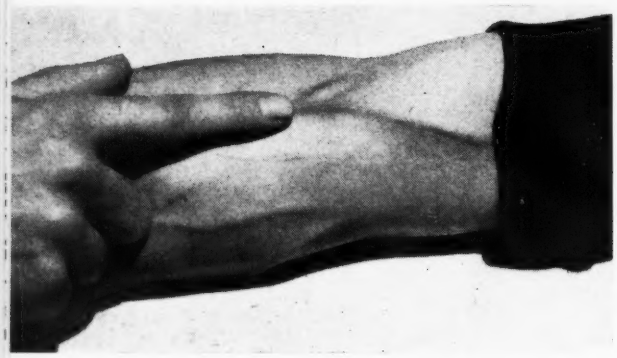
▼ *A Red Cross field hospital is set up just as it would be during an earthquake.*

BLOOD FOR CULTURE

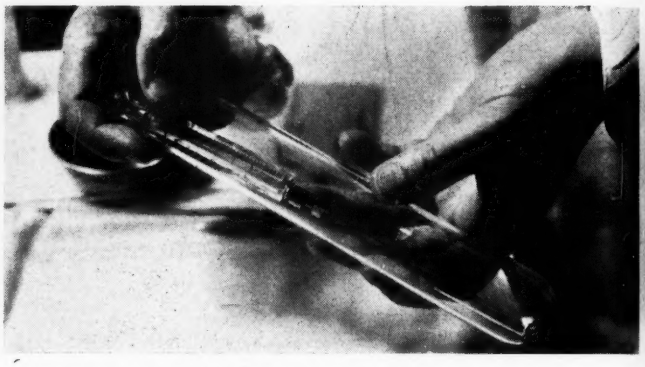
A filmstrip made at the Medical School and The General Infirmary at Leeds, under the direction of Professor C. L. Oakley, F.R.S., and obtainable from Reckitt and Sons, Hull.

◄ *A dre immediately It is not ne be sterile, b clean. Ex sphygmom a bowl of syri*

The top of provided in two sterile with needle swabs, two sterile arter ture bottles.



For a sample of blood (usually obtained from a superficial vein in the cubital fossa) the patient's arm is placed on a pillow and a sphygmomanometer cuff applied to the upper arm.

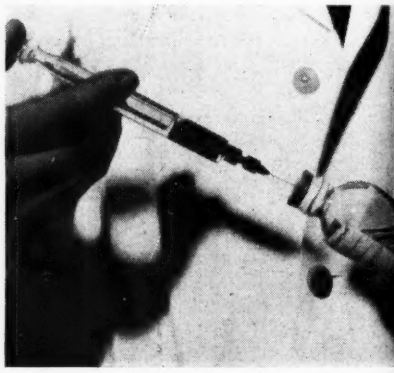


The syringe, preferably all-glass, is now removed from its sterile container and tested. It was sterilized by dry heat which should be used routinely for glassware. The syringe is then left ready for immediate use.

In the laboratory the inoculated bottle is examined at regular intervals for the presence of micro-organisms.

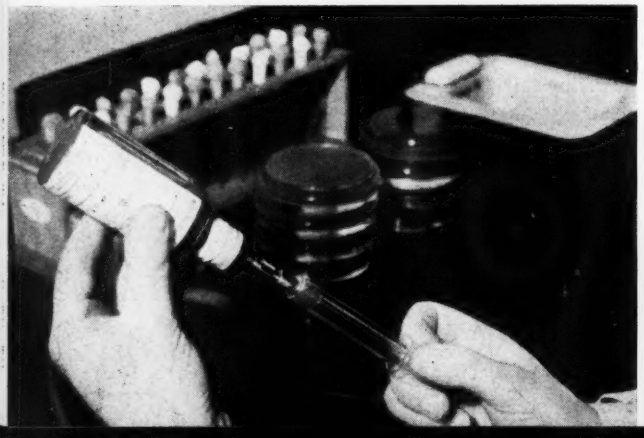
◄ *The required amount of blood (5 ml. per bottle) has been withdrawn into the syringe. The cuff is deflated and then withdrawn. The puncture wound is covered with a sterile swab.*

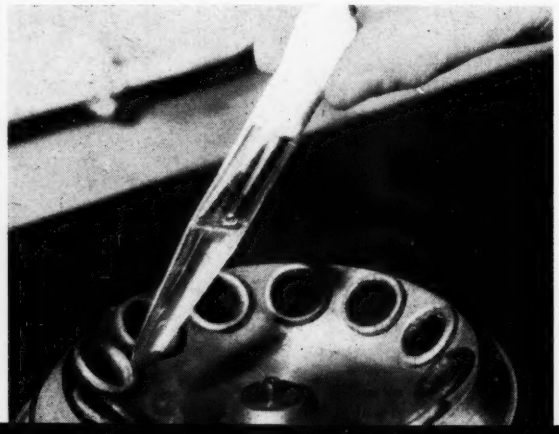
Immediately after collection the blood is inoculated into the ► culture media through the sterilized rubber diaphragm. To prevent clot formation the blood is thoroughly mixed with the medium. The inoculated bottles are immediately placed in an incubator at 37°C. (i.e. body temperature).



After centrifuging, any organisms, along with the red blood cells, become a red deposit beneath the yellowish supernatant fluid.

The su rded approp conta

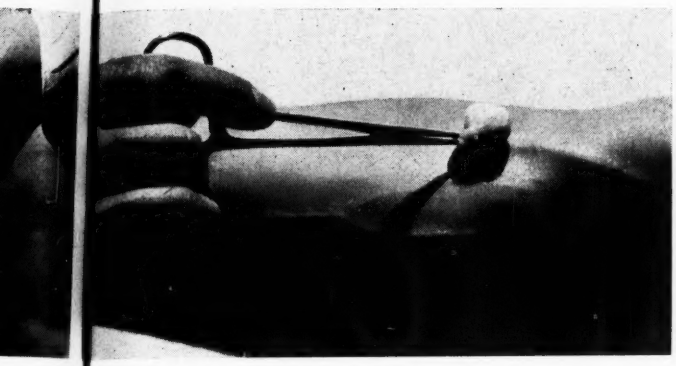




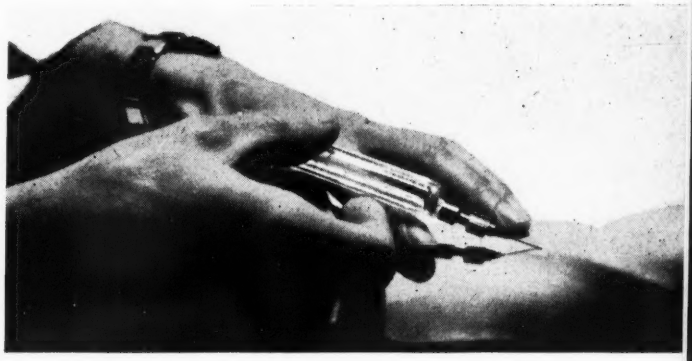
◀ *A dro immediatel It is not n be sterile, b clean. Es sphygmom a bowl of syri*

The top provided w two steri with needle swabs, tw sterile arte ture bottles.

Two types of media are used: (a) 1% glucose broth in right hand bottle; (b) a selective broth medium containing bile salts for the preferential isolation of the enteric group of organisms.



ample of blood a strictly aseptic no-touch technique must be used. A wide in and around the cubital fossa is sterilized with surgical Dettol using swabs held in sterile forceps. The skin is then swabbed with alcohol.



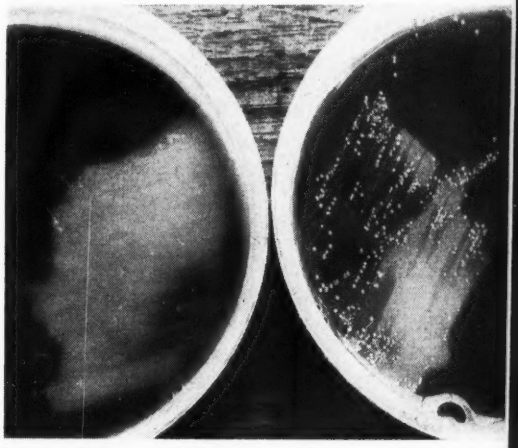
The vein of choice is held firmly by stretching the skin in a downward direction below the elected point of entry of the needle and the needle inserted.

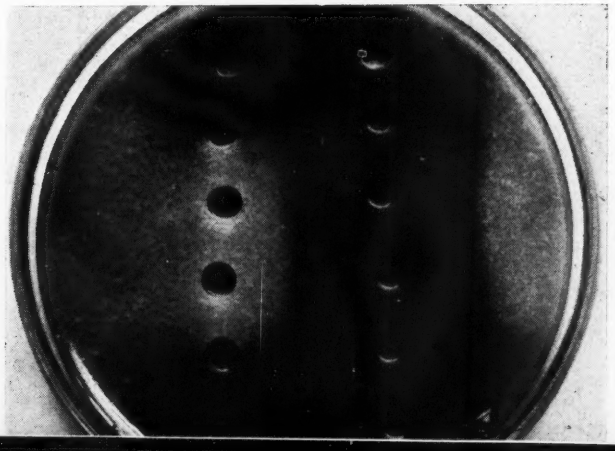
The s arded and a loopful of the red deposit is inoculated on to approp contained in plates which are then incubated overnight.

In many bacterial infections organisms are found circulating in the blood, and their presence is detected by means of blood culture. Since it is essential to prevent bacterial contamination of the specimen and of the prepared culture, a strict aseptic technique is necessary throughout.

After overnight incubation ▶ there are three possibilities: (a) the culture plates may be sterile; (b) a pure culture of an organism responsible for the disease; (c) a mixed culture—the result of contamination due to a faulty technique.

The organism shown, a Streptococcus viridans, has been tested against penicillin, streptomycin, aureomycin, chloromycetin and erythromycin at a concentration of 2 and 20 units. The antibiotics were placed in the punch-holes. Zones of no growth indicate sensitivity to the antibiotic. A report is immediately sent to the ward. ▼

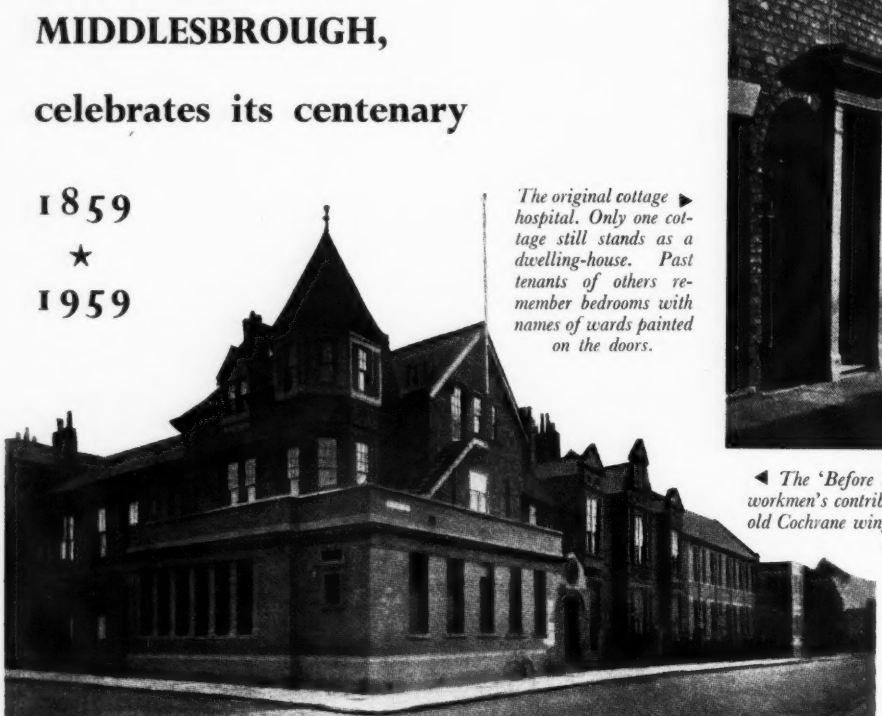




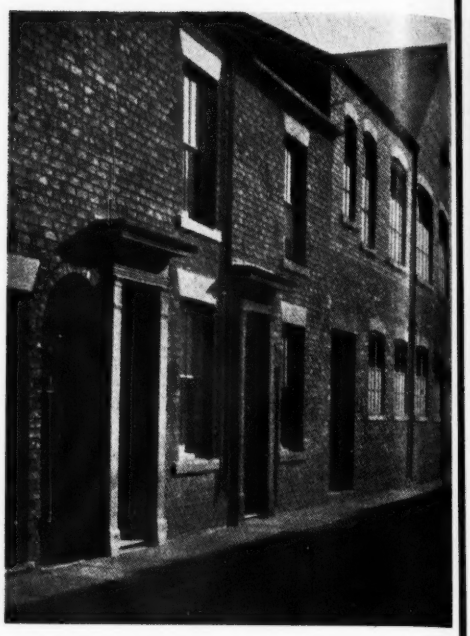
NORTH ORMESBY HOSPITAL, MIDDLESBROUGH,

celebrates its centenary

1859
★
1959



The original cottage ▶ hospital. Only one cottage still stands as a dwelling-house. Past tenants of others remember bedrooms with names of wards painted on the doors.



◀ The 'Before Breakfast Wing' (built in 1891 with workmen's contributions earned before breakfast) and the old Cochrane wing. These wings were extended in 1910 and 1924 respectively.

Old and new operating theatres: seven operations were recorded in the hospital's first year against over 60 ▼ a week now.

North Ormesby Hospital, Middlesbrough, has just celebrated its centenary. It has an interesting history: beginning as a cottage hospital—some claim the first cottage hospital in the country—it was founded as the result of a local disaster, an explosion, when it was brought home to the inhabitants particularly forcibly that the locality was completely devoid of hospital facilities and nursing care. Two of the 16 men injured in the explosion died on the way to the infirmary at Newcastle 40 miles distant; others were taken to be cared for in their own homes; two were placed in a stable adjacent to an open sewer behind a public house where they were 'nursed' by two men whose efforts began and ended with administering the medicines prescribed by the doctor. Two enterprising people decided to end this state of affairs—John Jordison,

postmaster and printer, and Mary Jacques, whom he approached to help him.

A Kaiserswerth Student

Mary Jacques had studied under Pastor Fliedner at Kaiserswerth, only seven years after Florence Nightingale had done so. She consulted the Mother Superior of the sisterhood to which she belonged and then rented two unprepossessing houses in Middlesbrough which she converted into simple hospital accommodation, paying the cost, £181, herself. She was joined by several other members of the sisterhood and on March 9, 1859, the hospital at 46, Dundas Mews, received the first of its 164,000 patients.

In the first nine months 55 patients were admitted and 490 outpatients treated. This small hospital, started by individual effort and enterprise, staffed by devoted doctors and nurses and supported by local industrialists and a few grateful private subscribers, was to set a pattern for the beginnings of a hospital service in the growing towns of the industrial north.

In July 1860 the foundation stone was laid of a new hospital at the present site at North Ormesby—then little more than a village just beyond the outskirts of Middlesbrough. This hospital accommodated 25 patients and cost £2,646 to build. Although much added to by subsequent building, the outline of the modest original building can still be detected.

The new hospital was lit by candle light, and the gas lighting introduced in 1867 was reported as 'a great improvement'. Operation day was on Friday, and a total of seven were performed during the first year (in the operation theatre complete with coal fire, plush tablecloth and aspidistra). Now there are twin theatres in which 60 operations are performed each week.

These contrasts are typical of many others. Today the hospital has 184 beds, is a complete training school for men and women nurses and has its own preliminary training school. The matron is Miss D. Clubley.

FILM APPRAISALS

Films for Teaching

Human Blood Cells

16 mm. silent, black and white, 15 minutes. Great Britain 1953. British Film Institute, 164, Shaftesbury Avenue, London, W.C.2.

Red blood cells and various white blood cells moving under a microscope are shown. It is a fascinating film to watch. Nurses would very much enjoy seeing it as a treat, but it runs for longer than is necessary for those who are only seeing it for interest and not learning to differentiate between the various types of cells.

Blood Transfusion

16 mm. silent, black and white, 14 minutes. Great Britain 1931. BMA Film Library, BMA House, Tavistock Square, W.C.1.

The method of taking blood from a donor and its transfusion into a patient with haemophilia is shown. This film was made before the introduction of a transfusion service and is of historic interest only.

Techniques of taking Blood Specimen for Serological Test

16 mm. silent, black and white, 7 minutes. BMA Film Library.

This film shows the method of taking blood from a vein with a specially adapted syringe needle. The technique is too out of date to make this film useful to nurses.

Blood Transfusion

16/35 mm. sound, black and white, 38 minutes. Great Britain 1942. Central Film Library, Bromyard Avenue, London, W.3.

This film was designed to show the history of blood transfusion and the spread of blood transfusion services throughout the world. The only section that might have been useful is an explanation of blood grouping but this is too rapid for anyone to grasp. The rest of the film is too out of date to be of value.

The Therapeutic Uses of Radio-active Isotopes

16 mm. colour, 20 minutes. Great Britain 1955. Photographic Department, Royal Marsden Hospital, Fulham Road, London, S.W.3.

This film shows a series of different techniques for using isotopes in the treatment of various conditions. It has no beginning, middle or end, being simply a record of ways in which isotopes may be used, in some cases comparing the success of different isotopes in the treatment of, for example, carcinoma of the bladder. There are magnificent shots of the insertion of radio-active tantalum wire into the bladder, and the method of implanting 'pellets' in a carcinoma of the breast with a 'gun' is shown.

Appraisal. This is a fascinating film, giving a glimpse of the scope of the use of isotopes. It would arouse great interest at a study day (preferably with a speaker) and could well be shown to senior nurses for general interest. A sound commentary would make it easier to follow.

Audience. Nurses in second and third years of training.

Handling and Measurement of Radio-active Isotopes for Clinical Purposes

16 mm. colour, 35 minutes. Great Britain 1953. Physics Department, Royal Marsden Hospital, Fulham Road, London, S.W.3.

This is a companion film to *The Therapeutic Use of Radio-active Isotopes*. It shows the special techniques used in preparing the isotopes whose use is demonstrated in the second film. It is too long and technical to be of value to nurses. The only sections easily followed are those showing the arrival of the isotopes from Harwell (in the boot of a car) and their storage, and the final section showing disposal of 'hot' material in a remote pit! Even with notes the rest is not easy to follow and a sound commentary would have been helpful.

THIS IS MY JOB

Chairman of the General Nursing Council for England and Wales

THE office of chairman of the General Nursing Council for England and Wales is not, as so many people tend to think, one that is held for an indefinite period of time. The chairman is elected annually by the members of the Council at their September meeting. Although the chairman is eligible for re-election, there is no obligation on the part of the members to elect her.

When the General Nursing Council came into being following the passing of the Nurses Registration Act in 1919, the chairman then elected was not a nurse. The first nurse to be elected, in 1926, was Dame Ellen Musson, D.B.E., LL.D., who held office for 18 years. The subsequent chairmen have also been nurses. Miss D. M. Smith, C.B.E., was chairman for 11 years and the present occupier of the chair has held office for the last three years.

Formal Open Meetings

The chairman of the General Nursing Council presides at the meetings of Council which are held on the fourth Friday of every month except August. These are formal meetings open to the public and the Registrar of the Council acts as secretary. After matters arising out of the minutes and correspondence have been dealt with, the chairmen of the various committees of Council move the adoption of their respective reports with any recommendations. The committees presenting reports are the Finance, Education and Examination, Registration, Disciplinary, Mental Nurses and Assistant Nurses committees. Should members of Council wish to discuss any matters arising, the Council may go into committee; this allows a member to speak more than once on the item under discussion. When a decision has been reached Council resumes before the proposal is put formally to the meeting. After all the reports have been adopted, any disciplinary cases are dealt with; the nurse concerned is expected to be present and may, if he or she wishes, be represented by counsel or a solicitor or be accompanied by a friend.

MISS MARGARET J. SMYTH, who has been awarded the C.B.E. in the Birthday Honours was formerly matron of St. Thomas' Hospital, and superintendent of the Nightingale Training School.

Considering these disciplinary cases is one of the heaviest responsibilities laid upon the Council; and, while most careful consideration is given to the merits of each individual case, it will be appreciated that the official nature of the proceedings must be maintained throughout. The Council deliberates and comes to a decision *in camera* and the chairman announces the decision in public and in the presence of the nurse and his or her representatives. The number of, and time spent on, these cases determines the length of the whole meeting of the Council, which may be 20 minutes or even two-and-a-half hours.

The chairman of Council, with the vice-chairman, is *ex-officio* a member of all committees and sub-committees with the exception of the two statutory committees, the Mental Nurses and the Assistant Nurses committees. The members of all committees except these two are elected annually from members of Council willing to serve. When the election of members to serve on the Mental Nurses and Assistant Nurses committees takes place, in practice the chairman of Council is among those elected, although again this is not obligatory. She would, however, be in a very difficult position if she were not elected, for it is important that she should be well informed of all that takes place at the various committee meetings. On occasion her knowledge of all the discussions that have taken place at other meetings on a particular matter may be of value in helping to arrive at a decision.

As well as the regular monthly meetings of committees, meetings of sub-committees may take place monthly or more or less frequently as required. The chairman of Council has also from time to time to lead deputations from the Council to the Ministry of Health and to various other bodies, such as the Ministry of Education or the Central Midwives Board, for specific matters as may be necessary. From this it may be estimated that the chairman of Council may attend a dozen meetings during a month and 110 or more in a year, all of which are intensely interesting.

PAST CHAIRMEN OF THE GENERAL NURSING COUNCIL

DAME ELLEN MUSSON, D.B.E., R.R.C., LL.D., S.R.N., chairman from 1926-44, from the painting by Dame Laura Knight, R.A. ▶

◀ *MISS DOROTHY M. SMITH, C.B.E., S.R.N., chairman from 1944, from the painting by Harold Knight, R.A.*

Of what use can the chairman of Council be, beyond dealing with the formal duties of presiding at meetings of the Council and taking part in the various meetings of committees and sub-committees? This is difficult to put into words. The committees discuss training, finance, registration and disciplinary matters and recommend matters of policy for acceptance by the Council. The registrar is responsible for all the actual work of the Council which includes matters legal, professional, financial and administrative—a formidable task—and has, to assist her, the education officer, the inspectors of nurse training, schools and a staff of approximately 120 other people. The chairman can, however, be of assistance; first, perhaps, by trying to have a really sound knowledge of the functions of the Council under the various Nurses Acts culminating to date in the consolidating Act of 1957. She should also keep up to date with what is happening in the nursing world, the various trends, the criticisms, the suggestions and the changes taking place in this country and abroad. She will then be the better able to give real help in discussions at meetings and also perhaps to put forward proposals for consideration apart from those on the official agendas. Like other members, she will of course have her own opinion on matters, and this may not always coincide with the policy of the Council, but as chairman, she will always support the Council in its policy, for an opinion expressed by the chairman, even when out of Council, may be taken as Council's policy.

'Very Human Human Beings'

It is important that the public should realize (and far too few within the nursing profession do realize) that the General Nursing Council, as a statutory body, has its functions laid down by Acts and Rules, outside which it has no authority to act. The Council is sometimes criticized for its apathy or apparent lack of interest in certain matters, such as, for example, conditions of service, recruitment, nurses' salaries, to name a few. These, however, are outside the jurisdiction of Council and must be dealt with by the appropriate bodies responsible for them. The Council is really a very human body composed of very human human beings who have accepted election or appointment because of their interest in preserving good health in the community and in providing for the training of young men and women to give the best possible nursing care to the members of the community when they require it.

MARGARET J. SMYTH.

Local Government Health News

County Borough of Sheffield

"There's naught so tedious . . ." . . . as a medical officer of health's annual report. This is not always true of course but it is near enough to the truth in far too many cases. It is refreshing therefore to come across the far-from-tedious report of Dr. Llywelyn Roberts, MOH for Sheffield, which is an oasis of wit, wisdom and finely written prose in what is often a desert.

Perhaps the most striking aspect of this model report is the fact that each section is written—and well written—by the person who actually did the job. Miss I. Littlewood, superintendent health visitor, was responsible for the section on health visiting; midwifery was covered by Miss D. E. Tate, the Council's non-medical supervisor of midwives; Dr. Catherine Wright, assistant maternity and child welfare medical officer, wrote the section on problem families. Slum clearance, clean air and clean food were covered by various members of the public health inspectorate.

Another entertaining innovation is the practice of heading each section of the report with an apt classical quotation. BCG Vaccination, for example—"Stay Master Needle, you do prick too fast" (Ben Jonson, *The Magnetic Lady*); Health Visiting—"It is always a silly thing to give advice, But to give good advice is absolutely fatal" (Oscar Wilde, *Portrait of Mr. W.H.*); Midwifery—"Yea, the stork in the heaven knoweth her appointed time" (Jeremiah, vii, 8); Ambulance Services—"Although it is a long time on the road, it is on the road and coming" (Charles Dickens, *Tale of Two Cities*).

The section on Vital Statistics—"The jury eagerly wrote down all three dates on their slates, and then added them up, and reduced the answer to shillings and pence" (*Alice in Wonderland*) shows that the staff of Sheffield Public Health Department do not spend all their time in literary research. Sheffield's infant mortality rate of 20.6 per thousand live births was a considerable improvement on the previous year and compares with a national rate of 23.1. The death rate from pulmonary tuberculosis showed a further decrease during the year, the death rate of children under two years of age from enteritis and diarrhoea was the lowest ever recorded and *for the third successive year* there were no maternal deaths to record.

A splendid record—embodied in a report which deserves to become a 'best seller'.

City of Bradford

Laundry Service for Incontinent Chronic Sick Bradford Corporation, in co-operation with the Bradford District Nursing Council, has arranged for a regular supply of clean drawsheets to be supplied to incontinent chronic sick patients nursed at home by district nurses. A washing machine, spin dryer and a rotary iron have been installed at the Council's disinfecting station and soiled drawsheets from such patients are washed and clean drawsheets provided according to their requirements. The service is now running well and is much appreciated by those using it.

Home Safety Bradford's MOH is concerned at the large number of accidents in the home, particularly to children and old people, caused by unguarded fires. After hearing his recommendations the Council agreed to buy 50 fireguards. These are to be stored at the Edmund Street Clinic and are to be lent, free of charge, to selected members of the public to protect those most vulnerable to such accidents.

In Parliament

Subsidized Accommodation Mr. Hamilton (Fife, West) asked the Minister of Health on June 8 for his latest estimate of the extent to which nurses' accommodation was subsidized.

Mr. Walker-Smith.—While charges are generally below the cost of providing accommodation and other services for resident nurses, no comprehensive estimate of the size of the subsidy is available.

Proportion of Salary paid as Residence Charge

Grade (General Nurses)	*Up to 28.2.59*		*From 1.3.59*	
	At minimum of scale	*At maximum of scale*	*At minimum of scale*	*At maximum of scale*
	%	%	%	%
Student Nurse	45	41	45	40
Staff Nurse	36	29	36	29
Ward Sister	33	27	33	26
Matron (lowest grade) ..	33	30	33	29
Matron (highest grade) ..	26	22	27	23

Whitley Council Miss Alice Bacon (Leeds, S.E.) asked the Minister to give the composition of the Staff Side of the Nurses and Midwives Whitley Council, according to the type of hospitals in which members worked, and the nursing grades to which they belonged.

Mr. Walker-Smith.—Under the constitution of the Nurses and Midwives Whitley Council the Staff Side of the Council is composed as follows:

Organization	*No. of representatives*
Association of Hospital Matrons ..	2
Association of Supervisors of Midwives	1
Confederation of Health Services Employees	4
Association of Hospital and Welfare Administrators	1
National and Local Government Officers Association	4
National Union of General and Municipal Workers	3
National Union of Public Employees	4
Royal College of Midwives ..	6
Royal College of Nursing ..	12
Scottish Matrons' Association ..	1
Scottish Health Visitors' Association	1
Women Public Health Officers' Association	2
	41

I am not aware of the professional status of the individual members of the Staff Side although I understand that a number of them are serving nurses. The composition of the Staff Side is a matter for the Staff Side itself and the members are appointed by the organizations they represent.

Overtime Payment Miss Bacon also asked the Minister if he was aware of the discontent among staff nurses in hospitals because the new agreement on nurses' salaries did not allow for extra payment until 96 hours per fortnight had been worked; and what action he proposed to take.

Mr. Walker-Smith.—No; the new arrangements for additional payments were agreed between the two Sides of the Whitley Council and the latter part of the question does not therefore arise.

Deduction for Accommodation Mr. Hamilton asked the Minister what proportion of a nurse's pay was deducted for accommodation before the recently announced increase in her salary; and what would be the proportion after the increase had become effective.

Mr. Walker-Smith gave the following information.

The proportion of salary which resident nurses pay back to the hospital as a board and lodging charge varies according to grade, and within grades according to the incremental point reached on the salary scale. In the table above, figures are given for some of the main nursing grades in general hospitals.

OBITUARY

Miss E. M. Tether

We regret to announce the death on April 17 of Miss Elsie May Tether. Miss Tether trained at The London Hospital, and, after undertaking private nursing for a period, served at Birmingham General Hospital, and as housekeeping sister at the London Clinic. She had been an invalid for a number of years and had retired from active nursing work. She occupied herself in learning Braille in order to translate books into Braille, and is described by a colleague as 'a courageous person'. She was a member of the Hull Branch of the Royal College of Nursing.

Miss E. D. Geary, a nurse who won first prize in a recent 'Good Housekeeping' furnish ingcompetition, is presented with a cheque for £750.

APPOINTMENT

North East Metropolitan Regional Hospital Board

Miss Sheila P. White, s.r.n., s.c.m., hosp. admin. cert. (r.c.n.), has been appointed assistant regional nursing officer from July 27. After training at the Royal South Hants and Southampton Hospital and Glasgow Royal Maternity and Women's Hospital, Miss White held posts at the Royal South Hants and Southampton Hospital, in the Private Wing at the Royal Berks Hospital, Reading, as sister in the Q.A.I.M.N.S.(R.), home sister at Withington Hospital, Manchester, and second assistant matron, East Suffolk and Ipswich Hospital.

RETIREMENTS

Coppetts Wood Hospital, N.10

Miss F. O. Rhymes, home sister, retires on July 31. Former members of the staff wishing to be associated with her presentation please send contributions to matron, Miss S. A. Ramsey, before July 17.

Oldham and District General Hospital

Miss A. E. Knight, matron, retires at the end of August. Former members of the staff who wish to be associated with her presentation, please send donations to the deputy matron before July 31.

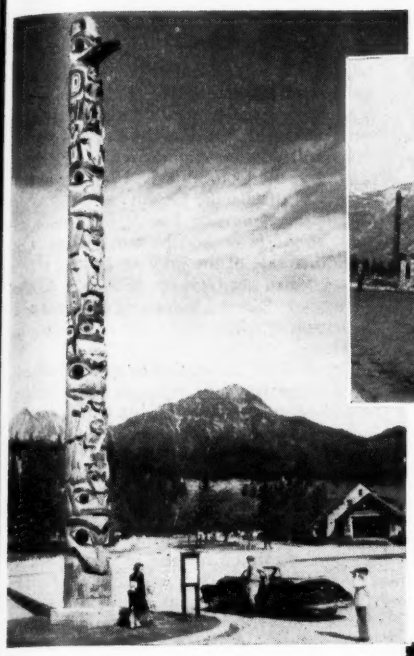
Royal Sussex County Hospital, Brighton

Miss I. Else, matron, is retiring on July 31. Will any former members of the staff who would like to be associated with the presentation kindly send their contributions to the assistant matron as soon as possible.

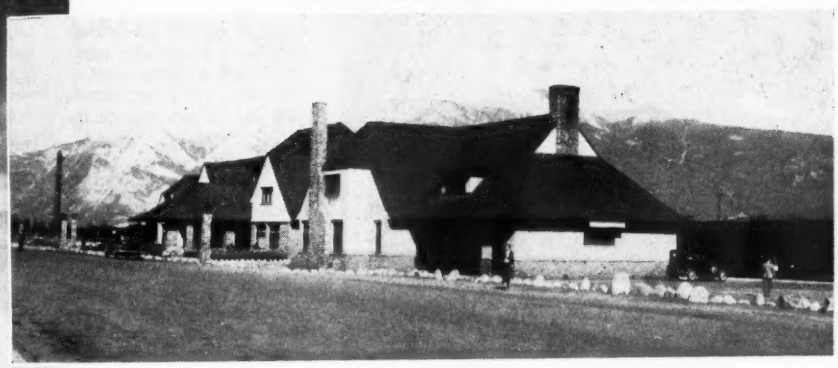
Whitecross Hospital, Warrington

Mrs. M. Taylor, matron, will retire on September 30. Any former members of the staff who would like to be associated with a presentation may forward contributions to Miss C. M. Sullivan, assistant matron.

STUDENTS' SPECIAL



Above: *a close-up view of the quaintly-carved Indian Thunder Bird totem pole at Jasper.*



The railway station at Jasper, Alberta; the totem pole can be seen at the extreme left.

Totem Poles at Jasper

Ray Dorien describes the delights of a beautiful Canadian holiday centre in the area which the Queen will visit

Photos: Canadian National Rlys. and National Film Board of Canada.

YES, there it was, the first of the totem poles, carved and brightly coloured, standing 65 feet high beside the log huts of the Canadian National Railway station at Jasper National Park. Sunshine filled the valley, the gardens of the log houses set amongst the pine trees were full of velvet petunias and tall yellow daisies, and reaching to the blue sky were the peaks of the Rockies, eight and nine thousand feet high.

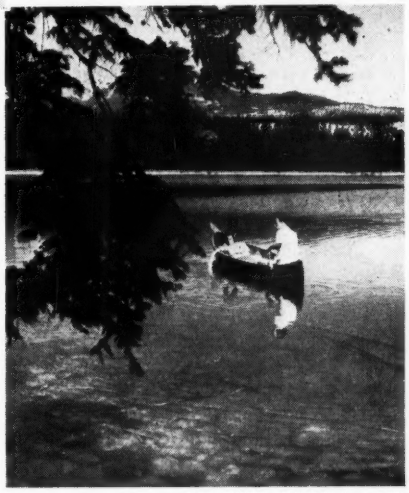
The information office was busy, for it was a holiday weekend. Lodges, cabins and tents were full, and during the summer season the inhabitants—the permanent population is about 1,500—let rooms. But no meals are supplied. I found a room not far from the station, and went to explore.

I was taken for a drive by the young schoolmaster of the district, spending his vacation in taking visitors around. You can do so many things at Jasper, for the National Park covers over four thousand square miles. The park was established in 1907. Before that the Athabasca Trail had been used by many explorers and fur traders on their way to the Pacific Coast. The name of Jasper came from a fur trader from Missouri, who had settled here in 1813, and the trading post was known as Jasper's House.

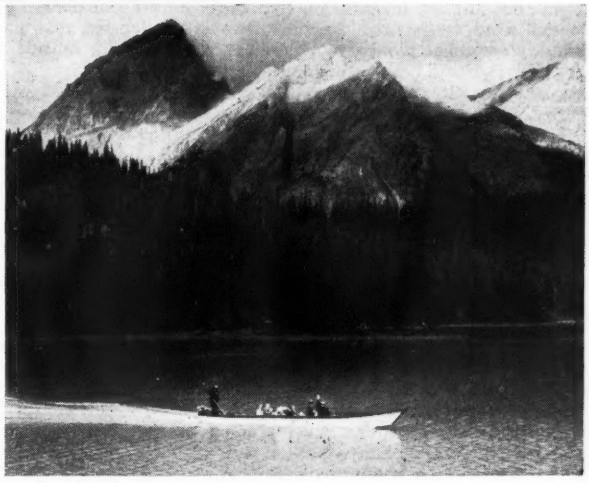
Here you can ride on horseback, climb mountain peaks, picnic in the forest, swim in the lakes or dance in the small halls in the holiday camps. I saw shelters, trailers, cabins, tents. People could bring their own tents or hire them. Tables were under cover, electricity, water and heat were laid on, and in the evenings there were film shows in the open. All kinds of playgrounds for all kinds of people, for every taste and every range of income. All you needed was a car to get the family to a cabin by one of the lakes, where the trout, according to my guide, were extra size. I saw the fish hatchery, and met the mosquitoes—also extra large size!

I had an invitation to lunch at the luxury hotel, Jasper Park Lodge, run by the Canadian National Railway. The Lodge is about three miles from the little town, set in the forest beyond a loop of the Athabasca River. The Lodge is a super luxury log hut, a long, low building with a gabled roof, but it is built of steel and reinforced concrete to minimize the risks of fire

(*continued overleaf*)

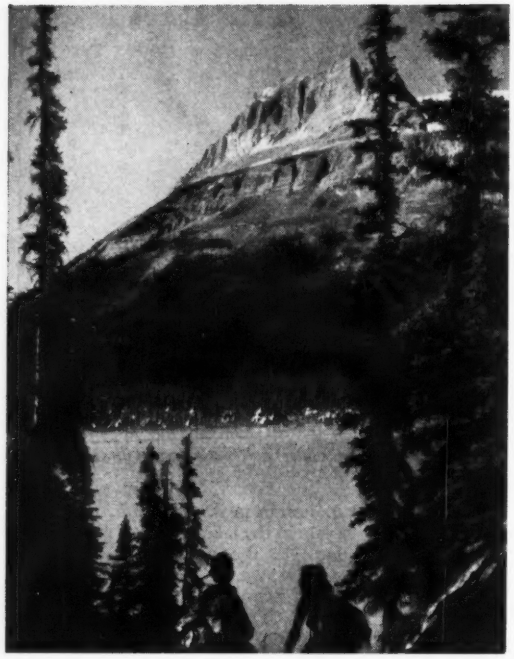


Above: *The pleasures of canoeing on Lake Beauvert, at Jasper. Placid green waters surrounded by pine woods and the Rocky Mountains.*



Maligne Lake, Jasper National Park (right). Surrounding mountains were renamed 'Queen Elizabeth Ranges' to commemorate the Coronation.

A Weekly Feature of Interest to Younger Nurses



Another glorious glimpse of lake and mountains. Across the water, the tented camp of the Alpine Club of Canada can just be seen between the trees.

which destroyed the previous building. It was difficult to realize the steel and concrete, for the roof has been shingled with British Columbian cedar, and the overhanging eaves, and the banks of flowers give it a character in keeping with its forest background.

Here were two more totem poles, but these were not carved by the Haida Indians, as were those at the railway station, but by a white man, a Canadian, Arthur Price, who has studied the art. These poles have steel spines, and are carved all round, whereas the Indian totem poles were carved only in the front.

The outdoors had wandered into the enormous lounge, for there were long flower boxes filled with white Canterbury bells. And although the air and the luxury *may* have gone to my head, I do assure you that these flowers were as large as teacups. It was not just my imagination that the flowers were larger and brighter than ordinary ones. The plants are a few thousand feet (3,470 to be exact) nearer to the sun, and in that exquisite clear air they glowed with radiance.

The dining-room was half the length of the Central Station concourse in Montreal, but I couldn't care about its size for I was looking at the view through the wall. Yes, through the wall, for the entire stretch was made of glass, and through it I could see Lake Beauvert, the colour of emerald, the dark trees around it, and beyond, the snowy peak of Mount Edith Cavell.

It seemed all wrong to eat in such magnificent surroundings, but you will be relieved to hear that I did justice to the iced melon and the salmon. Five hundred people can be served at a sitting, and the waiters and waitresses are usually students, earning money and holidaying at the same time. I saw the ballroom, the patio, the terrace overlooking the lake, and the detached log cabins. Visitors do not sleep in the main building, but in these cabins at varying, but quite expensive rates, and a waiter went by on a tricycle, transporting a meal tray fitted with an electric heater for someone who wanted a meal served in private.

Jasper Park adjoins Banff Park (which the Queen and Prince Philip will visit), and together they encompass more than 6,700 square miles in the heart of the Rockies. The highway which links them goes past the Columbia Icefield, which covers nearly 130 square miles. No wonder it is called the 'Mother of Rivers', for from that icefield flow the 765 mile long Athabasca into the Arctic Ocean, the Saskatchewan 1,205 miles on its long journey into Hudson Bay, and the Columbia 1,210 miles to the west and the Pacific Ocean.

The next morning I went for a walk to look at the famous Athabasca River. On the other side of the grey and silver river, was a tablet set high up in a rock to the memory of David Thompson, explorer and geographer, who crossed the Athabasca in 1811.

Inspired by the exploring spirit, I set off down the forest trail to Jasper Park Lodge. I had taken two steps off the train when I saw a large black bear ambling along my road. He had his back to me.

Suddenly, without any conscious decision on my part, I had turned, and was walking nonchalantly, but very, very quickly, away from him, back to the bridge. So much for the exploring spirit.

Of course, the bear was probably making for the garbage cans of the hotel for his lunch, and probably he wouldn't have noticed me, but all the same I don't regret my hasty return to Jasper.

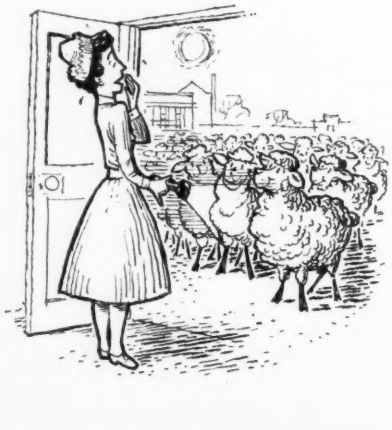
When the Queen and Prince Philip complete their Canadian tour, they will have travelled 15,000 miles by car, train, ship and plane. They will have seen the country and its people as few Canadians themselves have ever done.

Floating Hospital

A former American hospital ship, the *Consolation*, has been equipped as a floating hospital, medical school and midwifery training school, under a voluntary scheme suggested by a group of San Francisco doctors. This summer the *Consolation* will sail on a year's cruise, visiting South East Asia, carrying doctors and nurses to bring medical care to remote parts.

A SHEPHERD'S CROOK FOR NIGHT SISTER?

NIGHT SISTER's 2 a.m. round was uneventful. Mrs. D, who normally slept well, had been found awake for no apparent reason so, after a chat, sister suggested she should count sheep. Later sister returned to her office, but after a short time she fancied that something unusual was happening outside so she proceeded to investigate.



On opening the outer door she decided she couldn't be really awake as she thought she saw a flock of sheep apparently awaiting admission. After ascertaining that she wasn't in fact suffering from hallucinations, she went to the telephone and notified the local police who smartly responded by sending round two white-gauntleted policemen. They proceeded to direct the sheep on to the tennis court. Four of the sheep however, failed to recognize either the authority or the traffic directions of the arms of the law, and stubbornly refused to enter the gate. They were fortunately sufficiently attached to the rest of the flock to bed down for the rest of the night, just outside the court. The day staff, too, thought that they were not really awake when they saw sheep on and around the tennis court in the morning.

The sheep had wandered from a farm about two miles distant, and were collected later by a very much relieved farmer.

It is now under consideration whether night sister should be provided with a crook in addition to a torch.

Royal College of Nursing

ANNUAL MEETINGS

Wednesday, July 1

Annual meetings of Private Nurses and Ward and Departmental Sisters Sections, and meeting of Staff Nurses Group.

6.30 p.m. SHERRY PARTY at Fulwood House by invitation of the Regional Hospital Board.

Thursday, July 2

11 a.m. DIVINE SERVICE, The Cathedral.

11 a.m. HOLY MASS, St. Marie's Church.

12.45 p.m. OFFICIAL LUNCHEON.

3 p.m. ANNUAL GENERAL MEETING.

8 p.m. PROFESSIONAL CONFERENCE: *Spinal Injuries—the Role of the Nurse in Rehabilitation.* Speaker: Mr. A. G. Hardy, M.A., B.M., B.CH., M.R.C.S., L.R.C.P., consultant to the Spinal Injuries Unit, Lodge Moor Hospital, Sheffield.

Friday, July 3

10 a.m. and 2.15 p.m. BRANCHES STANDING COMMITTEE.

8 p.m. CIVIC RECEPTION at the Town Hall.

Saturday, July 4

Annual meetings of Sister Tutor, Public Health and Occupational Health Sections.

Visits of Interest

10 a.m. (*a*) King Edward VII Orthopaedic Hospital: tour of hospital and visit to Hydrotherapy Department. (*b*) Lodge Moor Hospital: visit to the Poliomyelitis Unit.

2.30 p.m. (*a*) The Children's Hospital: new outpatient department. (*b*) Lodge Moor Hospital: visit to Spinal Injuries Unit. (*c*) The Royal Infirmary: Visit to the Psychiatric Clinic at Whiteley Woods. (*d*) Chatsworth House and gardens. (*e*) Steel, Peech and Tozer Ltd.: visit to Rehabilitation Unit.

Application forms and full particulars from the general secretary, Royal College of Nursing, London, W.1, or from Miss D. Shipley, Branch secretary, c/o The School of Nursing, Clarke House, Clarke Drive, Sheffield 10. Envelopes should be marked 'A.G.M.' and cheques should be made payable to the Sheffield Branch, Royal College of Nursing.

SHEFFIELD

BRANCH RESOLUTIONS

The following resolutions will be discussed at the meeting of the Branches Standing Committee to be held in the City Memorial Hall, Sheffield, on Friday, July 3.

(*a*) Honorary membership of the Royal College of Nursing. (Proposed by Southend and District Branch; seconded by Epsom and District Branch.)
(*b*) Election of chairman. (Boston and District; Westmorland.)
(*c*) Smokeless fuels. (Edinburgh; Glasgow.)
(*d*) Domiciliary staff salaries. (Edinburgh; Kirkcaldy and East Fife.)
(*e*) College publicity. (Brighton and Hove; Chichester and District.)
(*f*) Council membership. (Cardiff; Rhondda and Pontypridd.)
(*g*) Council elections. (Bath; Bristol.)

BRANCHES

Chichester. Royal West Sussex Hospital, Wednesday, June 24, 6.30 p.m. Meeting to receive report of College meeting on membership and to discuss agenda for next BSC.

Hull. Recreation Hall, Royal Infirmary, Wednesday, July 8, 7.30 p.m. General meeting to receive report of AGM and to plan autumn programme.

ROYAL COLLEGE OF NURSING APPEAL

for the Nation's Fund for Nurses

We usually receive at about this time some welcome donations which have been the result of some united effort such as a coffee morning, a jumble sale or a sale of work. Lately we have not had a donation of this kind and we hope that, before the summer is over, some people will find time to organize something of this kind and send the proceeds for this fund. We are most grateful for the donations received this week and to an anonymous donor for a gift.

Contributions for June 5—12

	£	s.	d.
Miss H. B. Upperton	1	0	0
Miss S. A. Bathard	1	1	0
Hayes. *Quarterly donation*		10	0
Wigan Branch	1	0	0
Alder Hey Children's Hospital. *Monthly donation*	2	2	0

Total £5 13s.

E. F. INGLE,
Secretary, Royal College of Nursing Appeal for the Nation's Fund for Nurses, 1a, Henrietta Place, Cavendish Square, London, W.1.

Nursing Times Tennis Cup

SECOND ROUND

The Middlesex Hospital
beat Charing Cross Hospital
A. 6–3, 6–1, 6–0. B. 6–1, 6–0. Teams. The Middlesex: A. Misses Beevis and Rolfe; B. Misses Fletcher and Miles. Charing Cross: A. Misses Theobald and Courtney; B. Misses Peskin and Wyand.

Harold Wood Hospital
beat Chase Farm Hospital
A. 6–3, 8–6, 6–0. B. 6–2, 6–1. Teams. Harold Wood: A. Misses Lewis and Dannatt; B. Misses Brooks and Strangleman. Chase Farm: A. Misses Sweetman and Cox; B. Mrs. Harris and Miss Carr.

St. George's Hospital
beat St. Peter's Hospital
A. 6–2, 6–1, 6–4. B. 6–0, 6–1. Teams. St. George's: A. Misses Smith and Gladstone; B. Misses McGrath and Williams. St. Peter's: A. Misses Dibble and Odlum; B. Misses Wallis and Hay.

Queen Mary's Hospital, Sidcup,
beat The Evelina Hospital
A. 6–0, 6–1, 6–0. B. 5–7, 5–7. Teams. Queen Mary's: A. Mrs. Hawes and Mrs. Lavis; B. Misses Redding and Kenyon. Evelina: A. Misses Reid and Dore; B. Misses Irwin and Wickenden.

Westminster Hospital
beat University College Hospital

A. 6–0, 6–2, 6–2. B. 6–1, 6–0. Teams. Westminster Children's: A. Misses Taylor and Turner; B. Misses Pulman and Blake. St. Leonard's: A. Misses Griffin and Legg; B. Misses Bohan and O'Donaghue.

COMING EVENTS

Brighton General Hospital Nurses' League.—AGM and reunion, Saturday, July 11, 3–6 p.m., in the recreation room. Bring-and-buy sale.

Dulwich Hospital.—Nurses garden party and prizegiving, June 27, 2.30 p.m. Former staff and their friends welcome.

NASEAN, South-West London Branch.—Sherry party, Board Room, St. George's Hospital, S.W.1, Wednesday, June 24, 8 p.m., in conjunction with South-East London Branch, to meet Miss Dorothea Thompson of the National Association of Practical Nurse Education in the USA. All SEAN's and pupils welcome. Tickets from branch secretary, 44, Penwortham Road, S.W.16.

New End Hospital, Hampstead, N.W.3.—Reunion and prizegiving, Wednesday, July 8, 3 p.m. All former members of nursing staff welcome. R.S.V.P. to matron.

QARANC.—Depot and T.E., Hindhead, Wednesday, July 1, 2 p.m., finals of the Medforth and Gillespie Tennis Cups. Thursday, July 2 (same place and time), athletic sports meeting, challenge cup competitions. Cups and prizes presented by Brigadier Dame Monica Johnson.

The Ranyard Mission.—Service of thanksgiving and dedication, Wednesday, July 1, 8 p.m., Lambeth Parish Church. Sermon by the Lord Bishop of Croydon.

The Royal Society of Health.—Council Chamber, Town Hall, Reading, Thursday, July 2, 10.15 a.m. *The Education of Children with Hearing Defects*, Dr. G. M. O'Donnell; *Recent Developments in Hearing Aids*, Mr. G. C. Johnson; *The Slaughterhouses Act 1958 with special reference to Section 3*, Mr. J. Green.

West London Hospital.—Prizegiving and reunion, Wednesday, July 1, 3 p.m. Past members of nursing staff welcome.

Here and There

Miss Celia Johnson (third from left) shows keen interest in the orthoptic department during a tour of the hospital after presenting the prizes at Moorfields Eye Hospital on May 21, with Miss M. B. MacKellar, matron, right. (See also below.)

Miss W. M. Parker

Miss Winifred M. Parker has been promoted matron of Lincoln County Hospital; she had already held various administrative posts at the hospital and was assistant matron until she took up her new duties. Miss Parker trained at the General Infirmary at Leeds, the Royal Northern Hospital, London, and the Mildmay Hospital, London. After several years' nursing experience as ward sister, she joined the Q.A.I.M.N.S.(R.) and served from 1944-47 in Normandy, India and Singapore.

Moorfields Eye Hospital

That the wide corridors and characteristic arches of Moorfields Eye Hospital in City Road owe their inspiration to Miss Florence Nightingale, who in 1855 became a life governor, was mentioned by the chairman of the board of governors, Mr. C. J. Malim, at the recent prizegiving. In a charming speech to the nurses to whom she had presented awards and certificates Miss Celia Johnson spoke of their great advantage in "being shown how to help people." Stressing that there was no margin for error in ophthalmic nursing care, Miss M. B. MacKellar, matron, said that the world shortage of nurses had been felt this year at Moorfields but that they were hoping to introduce the 44-hour week there in September. Plans for a new nurses home were announced by Mrs. V. A. L. Freeman, J.P., chairman of the nursing committee. The 1958 gold and silver medals were won by Miss B. M. Chapman and Miss F. E. Parsons respectively.

Phenylketonuria

At a meeting of the LCC on June 2, Mr. Ellis S. Hillman asked the chairman of the health committee how many children were born in the administrative county of London each year with phenylketonuria, what the committee was doing to detect the disease in infancy and if the chairman would consider following the example of Birmingham in having simple and inexpensive tests taken at infant welfare centres.

Mrs. F. E. Cayford, chairman, replied that there were not more than three cases a year in the county; that the subject had been receiving attention from the public health department for more than a year and the material for tests was not yet generally available—the firm who made it had promised supplies for one division to enable exploratory work to begin.

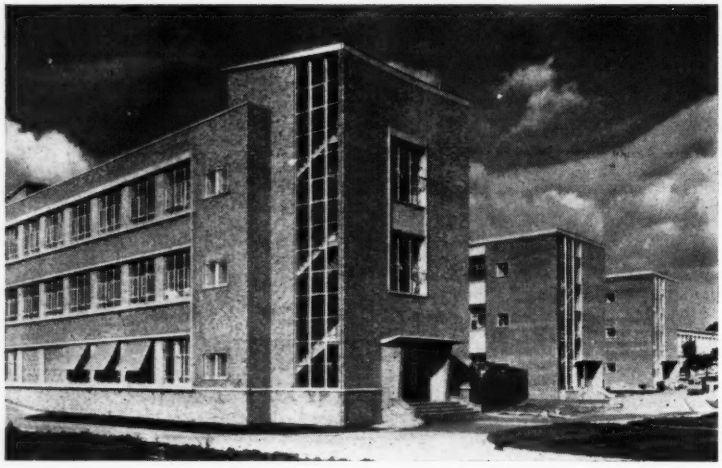
NCN Study Tour, Portugal

The National Council of Nurses study tour of Portugal will include visits to the University Hospital, Lisbon, the Portuguese Cancer Institute, Santa Casa da Misericordia de Lisboa, schools of nursing and a public health institution. There will also be visits to Estoril, the Monastery of Jeronimos, and excursions further afield.

The tour starts in Lisbon on Saturday, August 15. There are still vacancies, and further details may be obtained from the N.C.N., 17, Portland Place, W.1.

St. Chad's Hospital

St. Chad's Hospital, Birmingham, is being improved under a £100,000 scheme. "We have got to keep our nurses, and the aim of the scheme is to improve conditions" said Mr. H. C. Bowerman, administrator of the hospital.



Three new virus buildings—part of the five-year £2 million development plan for the Wellcome Research Laboratories, Beckenham, Kent—were officially opened by Sir Henry Dale, chairman of the Wellcome Trust, recently. The polio building is already exceeding its production target of four million doses a year of anti-polio vaccine. Above: *harvesting the virus infected chick embryo for yellow fever vaccine.*

Special Concession to Medical & Nursing Professions

*

ROBERT FIELDING has pleasure in offering his complete Salon facilities for Permanent Waving, Cutting, Shampooing, Setting, Manicure, Beauty Treatments, etc., at 33⅓% below list price. Don't forget to mention, when making your appointment, that you are entitled to this concession. Late evenings: Thursday and Friday.

Coming Events

The burden of morning sickness in the early days of pregnancy can be most distressing especially to sensitive women. Fortunately, BiSoDoL can be relied on to give speedy relief, by neutralising excess acid and so allaying nausea without interfering with the process of normal digestion.

BiSoDoL Powder contains sodium bicarbonate, magnesium carbonate, bismuth aluminate and diastase. Compounded in a superfine powder and flavoured with oil of peppermint it is easy and pleasant to take in either water or milk.

Clinical samples and our booklet "A New Approach to Morning Sickness", together with separate instruction cards for your patients are available on request to the Professional Department.

MATRON

THE NATIONAL HOSPITAL

QUEEN SQUARE, W.C.1.

(3554)

DUNBAR COTTAGE HOSPITAL
DUNBAR, EAST LOTHIAN, SCOTLAND

MATRON

Applications are invited for the above post from R.G.N. or S.R.N. The hospital has 13 beds for medical and surgical patients. Administrative experience an advantage. Post vacant 1st September, 1959.

Salary scale £850 x £30 (4)—£925 p.a. Deduction for emoluments, £265 p.a.

Applications, stating age, qualifications and experience, with two names of referees, to be received by Secretary, East Lothian Hospitals Board of Management, 31 Court Street, Haddington, before 21st June, 1959. (3585)

Shrewsbury Hospital Group
CROSS HOUSES HOSPITAL

(174 beds)

Matron required. S.R.N., S.C.M. Vacant 1st June, 1959. Hospital consists of maternity, gynaecological, post-operative and geriatric beds.

Applications, with names of two referees, to Group Secretary, Royal Salop Infirmary, Shrewsbury. (3605)

PARK HOSPITAL FOR CHILDREN, OXFORD

MATRON

The Management Committee of the Warneford and Park Hospitals invite applications for the post of **Matron** at the above psychiatric hospital for children, which has 30 beds and an active Out-patient Department.

Candidates may be either singly or doubly trained and must have experience in the care of disturbed children. Further particulars of the post may be obtained on application. Salary on Whitley scale, according to training and experience.

Applications, with the names of two referees, should be sent to the Medical Director, Park Hospital for Children, Old Road, Headington, Oxford, within two weeks of the appearance of this advertisement. (3629)

GARTH NURSING HOME
HORSHAM ROAD, DORKING, SURREY

Requires **Nurse** (S.R.N. and S.C.M., with knowledge of housekeeping) to take charge in absence of Matron. **Good salary and accommodation.** Pleasant surroundings. Age under 40.

Apply Matron. Telephone: Dorking 3816. (3602)

BURNLEY AND DISTRICT
HOSPITAL MANAGEMENT COMMITTEE

GROUP ASSISTANT MATRON

Applications are invited for the position of **Group Assistant Matron.** The person appointed will be resident at the Reedyford Memorial Hospital, Nelson, and will be responsible for the day-to-day nursing administration of that hospital (62 beds) and the Grove House Continuation Hospital, Barrowford, near Nelson (36 beds), under the supervision of a Senior Matron resident at the Victoria Hospital, Burnley.

Salary scale (300-499 beds): £805 rising to £925, less £240 residential emoluments.

The Reedyford Memorial Hospital is a busy acute hospital and includes casualty and out-patient work. A considerable amount of surgical work is carried out. The hospital forms part of a Group Training Scheme and is recognised by the General Nursing Council. Good accommodation is available, and the hospital is pleasantly situated and stands in its own grounds.

Applications, giving full details of age, training, qualifications and previous experience, together with the names and addresses of two referees, to the Group Secretary, Burnley General Hospital, Burnley, not later than the 24th June, 1959. (3577)

Kingston Group Hospital Management Committee
TOLWORTH HOSPITAL
RED LION ROAD, TOLWORTH, SURREY

Applications are invited for the appointment of **Assistant Matron** of Tolworth Hospital, Red Lion Road, Tolworth, Surrey, catering for infectious diseases, children, paediatric and chronic sick patients. Previous administrative experience essential. Possession of R.F.N. or fever experience desirable. This hospital is recognised for providing further experience for Student Nurses and Pupil Assistant Nurses.

Salary will be in accordance with the appropriate Whitley Council scale and the appointment is subject to the provisions of the National Health Service Superannuation Regulations.

Applications, giving details of age, qualifications and previous experience, together with the names of three referees, should be sent to the Group Secretary, Kingston Group Hospital Management Committee, 35 Coombe Road, Kingston-on-Thames, within 14 days of the appearance of this advertisement. (3603)

THE UNITED LEEDS HOSPITALS
GENERAL INFIRMARY AT LEEDS

(950 beds)

Applications are invited for the appointment of

DEPUTY MATRON

which becomes vacant on the 1st August, 1959. Wide experience in general nursing and administration essential.

Applications, stating age, qualifications and subsequent experience, together with the names of three referees, should be sent to the Matron, The General Infirmary at Leeds. (3511)

Huddersfield Hospital Management Committee
ST. LUKE'S HOSPITAL

(235 beds)

Applications are invited for the appointment of **Assistant Matron** at the above hospital. The Group Geriatric Admission Unit is based on this hospital, which also caters for acute medical and surgical, paediatric and maternity patients. The hospital is a Training School for the Assistant Nurse Training Scheme.

Applicants must possess S.R.N. and S.C.M. qualifications. Salary scale £775-£895 per annum, in accordance with the terms and conditions of service of the Whitley Nurses' and Midwives' Council.

Applications, with full particulars of age, qualifications and experience, accompanied by the names of two referees, should be sent to the undersigned not later than the 24th June, 1959.

H. J. JOHNSON,
Group Secretary.

Huddersfield Hospital Management Committee,
The Royal Infirmary,
Huddersfield. (3667)

Wandsworth Hospital Group
ST. JAMES' HOSPITAL
SARSFELD ROAD, BALHAM, S.W.12

(Recognised General and Midwifery Training School of over 600 beds)

DEPUTY MATRON

Applications are invited from State Registered Nurses who are State Certified Midwives, for the above resident post. Experience in the nursing administration of a general training school is essential.

The salary will be £782 x £21 (6) to £908 p.a., with a deduction of £[illegible] for residential accommodation.

Applications, giving full details of age, qualifications and experience, with three names for reference, should be sent to the Matron at above address. (3499)

ST. EBBA'S AND BELMONT GROUP
HOSPITAL MANAGEMENT COMMITTEE

Applications are invited for the appointment of **Deputy Matron** at St. Ebba's Hospital, Epsom, which specialises in early recoverable cases of nervous and mental illness and their treatment by the most modern methods. The hospital includes units for psychotic children and non-statutory patients. Candidates must be qualified Mental Nurses and State Registered General Nurses. Salary (£805-£925) and conditions of service as prescribed by the Nurses' and Midwives' Whitley Council.

Applications, giving age, present position, full details of qualifications and experience, together with the names and addresses of three referees, should reach the Group Secretary, Group Office, Belmont Hospital, Brighton Road, Sutton, Surrey, within 14 days of the appearance of this advertisement. (3749)

LIVERPOOL REGIONAL HOSPITAL BOARD

Applications should be sent, with details of age, qualifications, training, experience, and accompanied by copies of two recent testimonials (or the names of two referees), to the MATRON OF THE HOSPITAL CONCERNED, from whom further details may be obtained. Salaries are in accordance with National scales.

How Heinz Baby Foods simplify mixed feeding

The days are gone when mixed feeding involved mother in hours of work, sieving and straining meat and vegetables for her baby's dinner.

To-day, she finds it much more simple and pleasant—when you recommend Heinz Baby Foods as soon as baby is 11 or 12 weeks old. Baby takes his food more readily from a calm and relaxed mother, and this should result in happy, contented mealtimes that both mother and baby enjoy. And, with the 25 varieties of Heinz Baby Foods, a mother can give her baby the very best fruits, vegetables and meats all the year round.

All the ingredients used by Heinz are carefully selected, prepared in scrupulously hygienic conditions, and specially cooked to retain the maximum nutritional value. Accustoming baby as early as possible to this wide range of foods, trains growing appetites along healthy lines.

Further information about Heinz Baby Foods will be gladly sent on request. Please write to: H. J. Heinz Company Limited, Harlesden, London N.W.10

BY APPOINTMENT TO HER MAJESTY THE QUEEN PURVEYORS OF HEINZ PRODUCTS

"G-SUIT" FOR LEG ULCERS

In principle, the technique embodied in the "G (gravity) suit" worn to prevent black-outs in tight turns has many resemblances to the application of Elastoplast elastic adhesive porous bandages in the treament of gravitational ulcers. Both are supportive; both rely upon proper stretch and regain.

In certain cases where other procedures cannot be carried out on account of systemic disease or the patient's timidity, the veins can be assisted in their normal function by the pressure of an Elastoplast porous adhesive bandage. It is essential to have firm compression, but the usual crepe bandage or elastic stocking may not, in certain cases, afford sufficient support. The remarkable stretch and regain properties of Elastoplast ensure constant and correct compression.

Elastoplast elastic adhesive porous bandages are available in 3-yard lengths and 2", 2½" and 3" widths. Prescribable on form E.C.10.

Limb should first be covered vertically, with overlapping strips of Elastoplast about 12" long. Small holes should be cut in strips covering the ulcer to permit drainage of discharge. An Elastoplast bandage is then applied from toes to knee, enclosing the heel. Holes are cut in the bandage overlapping the ulcer. An absorbent pad is held in place on the outside of the bandaged leg, so that it can be changed.

Elastoplast
